TM10 MESH HAT

Cooler heads should prevail thanks to Tilley's new machine-washable TM10 Mesh Hat. That's because the wide brim and crown are made of Nylantium, Tilley's water- and mildew-resistant, UV-ray-blocking nylon. Plus, the mesh sides of the crown allow cooling air to flow through. *Tilley Endurables, 1-800-363-8737; www.tilley.com*

SPECIAL HONOUR
BEST NEW TYING MATERIAL

PSEUDO FLY-TYING MATERIALS

"Pseudo" means false or counterfeit, but Hareline's new Pseudo fly-tying products are fake only in the sense that they're made of synthetic, rather than natural, materials. Available in Hackle, Sparkle Hackle, Herl, Marabou and Barred Hair in several colours and widths, the Pseudo line offers endless possibilities for wild new fly patterns. *Hareline Dubbin, (541) 847-5310; www.hareline.com*

PRO-FLYFISHING FLY TYING VICE

Vosseler's Pro-Flyfishing Fly Tying Vice is truly innovative, from top to bottom. The suction-cup base can be mounted on any smooth surface (even vertically), while the vise itself rotates from five axis points. And the patented slotted jaws move to nearly any position along the vise's C-shaped arm while holding hooks securely on four sides. The standard jaw head holds hooks sizes 14 and up; the midge head secures hooks smaller than size 14. *High Line, (435) 787-4587; www.vosselerusa.com*

RAGE NATURAL INSECT REPELLANT

If you're concerned about the toxicity of chemical-based insect repellents, all-natural Rage may be perfect for you. Developed from a Native American herbal recipe, Rage features a natural oil base that makes it last longer than water-based products. And unlike some DEET-based repellents, it won't damage fly lines or synthetic materials, such as Gore-Tex. *Rage Enterprises, 1-800-848-4909; www.rageenterprises.com*
